

Sprint 23

Sprint 23 Retrospective:

Notes:

- Did not log hours for last burndown: Josh

What went right:

- Able to accomplish peer review within my target time range: Joseph
- research sw3 and do the upload picture implementation: David
- according to sprint planning, able to get a lot done. In terms: Rhoy
- get dependency injection demo to vong to get advice: ghabe
- I finished the LLD for user services, and fixed some older burndown charts: Frank

What went wrong:

- Nothing necessarily went wrong for me. Although I was busy yesterday and couldn't get much work done, I had planned for this and I still am on track to produce the code for code review: Joseph
- not able to the download yet: David
- havent started on the front end: Rhoy
- switching the connection string to another connection string to be used: Ghabe
- I still could not get the IIS to work properly, continued to underestimate how much of a roadblock this was. I should have considered more time to research my feature more, prototyping my ideas. My action plan was not followed through very well this sprint. I should have done an hour and a half each day but I could not manage that: Frank

Action plan:

- Reduce my hours of work would be a good idea, but I think that my capacity is going to be large this upcoming sprint so I may keep it the same. Or rather adjust the hours to be later like 8pm might be better, I think that it would be more

manageable than 5pm. However, on Monday and Wednesday I cannot work from 6 to 9pm.: Frank

- aim for less than 10% in completeness trend: Ghabe
- Everyone is increasing their capacity in order to be in time for code review: All
