

Sprint 20

Sprint Retrospective:

Notes:

What went right:

- Got work done and complete work able in analytics, able to have extra time in refactoring: joseph
- Finished all the LLD reputation feature and also different views: rhoy
- Got to implement JWT has a role base check: ghabe
- pretty good at getting work done per day: frank

What went wrong:

- completing functionality on a pin: ghabe
- Did not take into account of end to end test for analytics: joseph
- Was not able to finish all the work or end to end test: David
- Got lazy in doing work, so was not able to complete account deletion: Josh
- week was split up into two different parts and underestimated how long AWS would take: frank

Action plan:

- Focus on work that we did not do on to next Sprint 21: joseph
 - we can afford it because josh will be working on his own app specific feature, therefore other members have the capacity to continue the work items we did not finish
- completeness trend stay within -5% to +5%: frank
