Sprint 16

Work items

Assignment	Hours	Name
Ui Code	12	Joseph
Peer-Revew(4x)	16	Frank, Josh, Rhoy, David
Littermap part 1	24	Ghabe

Total: 52hrs

Ui Code part 1 Task Breakdown - Joseph

Task	Hours	Notes
Technology research	4	
anon view	1	
login view	1	
Account Register view	1	
Home view	1	
Home view (admin)	1	
dynamic hamburger menu	2	
profile nav view	2	
security view	2	
change password view	1	
change username view	1	
user management view	1	
Account delete view	1	

Total: 24hrs

Conclusion/summary	Name

I considered in this sprint to have more research time because it is a learning curve in using AJAX calls. Although I was able to get the base html structure on most of the views, CSS and JS still need to be revisited so that it can support the screen size on different devices. There is possibility that it can take less time if I get a hang on how to utilize AJAX calls as well as possibility communicating with the database. Since I put my capacity at 12 hrs, the extra 12hrs can be distributed to those who don't have any work to do and want to jump and help.	Joseph

Peer Review Task Breakdown - David

Task	Hours	Notes
Analyze Diagrams	1	
Peer Review Draft	2	
Peer Review Revisions and Final Changes	1	

Total: 4hrs

Backlog grooming

Notes	name	date
@here after todays office hours We need to revaluate the task items we're assigned. Only one person can do a peer review per person. Since @[] has a break down of peer review, he will be conducting it. So that we're on the same page as a team and that everyone knows what they're doing, I would like you guys to do a task break down atleast by tomorrow if you can. We currently have a team capacity of 52hrs. Work items we currently have: Ui code | 24hrs Peer review | 4hrs LLD map | 8hrs Total: 36 Option 1: pick up a task item in back log Option 2: pick up task from Ui Option 3: research your own app specific feature	joseph	02/22/23

Account Deletion Task Breakdown - Frank

Task	Hours	Notes
Fixing the tests	1.5	The code should not take too long to get functioning

after integrating the code		properly
Account Deletion Total	1.5	The amount left is not very much as all of the essential implementation is complete it is just the tests that need to be fixed after moving to the new system.

UI Code Task Breakdown (help joseph) - Frank

Task	Hours	Notes
Technology Research	3	While researching a new technology takes time, having Joseph already working on some of it can help me learn faster
Account Register View	1.5	The register account page has a few intricate parts for security but is simple fields for text and buttons
Login View	1.5	I think that the 6 hours is generous to get everything done to perfection, but for rough appearance without css it will work

Total: 7.5hrs

Conclusion/summary	Name
I am giving a rough time estimate, and would rather work less than more this sprint in an attempt to get most of it completed. Like Joseph said this sprint is more research as we are learning a new technology. If everything goes smoothly it should fit within 7.5 hours.	Frank

Original items were

- Ui code part 1 | 12hrs
- Peer-review (4x) | 16hrs
- littermap implementation part 1 | 24hrs

Total | 52hrs

Ending items

- Ui code part1 | 24hrs

- Peer-review | 4hrs

- littermap implementation | 24hrs

Total | 52hrs

Team Capacity Start	52hrs
Team Capacity Final	52hrs
