Choose a different product. This product has been done already.

Total Score: 17/50

Minimum Requirements

- Value - 10/15pt
- Feature Values - 5/20pt

Exceeding Qualities - 2/15pts

- Page numbers

Format Improvements

- Missing cover page
- Missing list of team members
- Missing team leader indication
- Missing date of artifact
- Missing table of contents
- Missing version history table for artifact
- Missing glossary of terms
- Missing project projections such as timelines, costs, resources, risks, etc.
- Missing product vision
- Missing core components
- Missing competitor analysis

Content Improvements

- Product goals should be based on quantifiable metrics as they can be measured to determine if the goal was reached. There is no way to consistently and accurately measure a subjective goal.
- Explicitly defining the scope for each feature will clarify the complexity and scale of the product such as quantifiable business rules
- Each feature must address how it aligns with the product value
- The product vision should elaborate on at least contain two parts: the future scope and the future features. The current section is not descriptive enough and does not convey an accurate scale and scope of the end product
- A detail market analysis or an existing competitor analysis will help identify if your product is viable
